SYSTEM OVERVIEW

Car Wash Management System

Complete inventory of security groups, menus, models, views & buttons — extracted directly from the live system

Security Groups	**5**
Menu Items	**22**
Custom Models	**16**
Views	**33**
Platform	**Odoo 19.0 Community Edition**

Table of Contents

1. Security Groups
2. Menu Hierarchy
3. Models
4. Views & Buttons per Model

> This document was generated by querying the running system directly (`res.groups` , `ir.ui.menu` , `ir.model` , `ir.ui.view` via `_get_view()` , which returns the fully merged arch including every module's view-inheritance overrides) rather than reading the source XML files by hand — so it reflects the actual current behavior, not just what any one file says in isolation.

1. Security Groups

All five groups share one `res.groups.privilege` ("Car Wash", defined in `carwash_base`). A user's visible menus, buttons, and record access are all driven by group membership — there is no per-user configuration beyond this.

Group	XML ID	Implies (inherits access from)
Front Desk	`carwash_base.group_carwash_user`	Internal User
Manager	`carwash_base.group_carwash_manager`	Front Desk
Washer/Detailer	`carwash_jobcard.group_carwash_washer`	Internal User
QC Inspector	`carwash_jobcard.group_carwash_qc`	Internal User
Owner	`carwash_multibranch.group_carwash_owner`	Manager, Multi Companies

"Implies" means membership in that group automatically grants everything the implied group grants too — e.g. every Manager automatically has full Front Desk access, and every Owner automatically has full Manager (and therefore Front Desk) access. Washer and QC are independent branches; neither implies nor is implied by the others.

2. Menu Hierarchy

The full menu tree under the "Car Wash" root app, in display order. "Groups" shows which roles see that menu item directly restricted at the menu level — many items show *All internal users* here because their real restriction happens one layer down, at the model's `ir.model.access.csv` level (a menu pointing at a model nobody in a role can read is automatically hidden for that role, with no menu-level `groups=` needed).

Car Wash	All internal users · (folder / submenu only)
Dashboard	All internal users · Dashboard
Advanced Analysis	All internal users · (folder / submenu only)
Overview	All internal users · Dashboard
Employee Productivity	Manager · Employee Productivity
Revenue by Service	Manager · Revenue by Service
Queue	All internal users · Queue
Appointments	All internal users · (folder / submenu only)
All Appointments	All internal users · All Appointments
New Appointment	Front Desk · New Appointment
Job Cards	All internal users · Job Cards
Inspections	All internal users · Inspections
Customers & Vehicles	All internal users · (folder / submenu only)
Customers	All internal users · Contacts
Vehicles	All internal users · Vehicles
Memberships	Front Desk · Memberships
Bays	All internal users · Bays
Configuration	Manager · (folder / submenu only)
Services	All internal users · Services
Checklist Templates	All internal users · Checklist Templates
Service Packages	All internal users · Service Packages
Membership Plans	All internal users · Membership Plans

3. Models

Every custom model in the system, grouped by the module that defines it. Six line-item / sub-detail models are not listed with their own menu or standalone view — they only ever appear embedded inside a parent record's form (e.g. job card checklist lines inside the Job Card form) — these are noted at the end of this section.

carwash_base

Technical Name	Display Name
`carwash.appointment`	Car Wash Appointment
`carwash.appointment.line`	Car Wash Appointment Service Line
`carwash.bay`	Car Wash Bay
`carwash.vehicle`	Car Wash Vehicle
`carwash.service.material.line`	Car Wash Service Consumable

carwash_jobcard

Technical Name	Display Name
`carwash.jobcard`	Car Wash Job Card
`carwash.jobcard.checklist.line`	Car Wash Job Card Task
`carwash.checklist.template`	Car Wash Job Card Checklist Template
`carwash.checklist.template.item`	Car Wash Checklist Template Task
`carwash.inspection`	Car Wash Vehicle Inspection
`carwash.inspection.photo`	Car Wash Inspection Photo
`carwash.service.package`	Car Wash Service Package
`carwash.service.package.line`	Car Wash Service Package Line

carwash_membership

Technical Name	Display Name
`carwash.membership`	Car Wash Membership
`carwash.membership.plan`	Car Wash Membership Plan

carwash_dashboard

Technical Name	Display Name
`carwash.dashboard`	Car Wash Dashboard Data Provider — non-stored, no menu/view of its own; exposes one method (`get_dashboard_data()`) consumed by the OWL client-action dashboard

carwash_multibranch and **carwash_website** add no new models — multibranch is security/data only (the Owner group + branch-isolation `ir.rule`s), and website is controllers/templates only, operating on the models above via `sudo()`.

Embedded line-item models (no standalone menu or view)

Technical Name	Lives inside
`carwash.jobcard.checklist.line`	Job Card form, "Tasks" tab
`carwash.checklist.template.item`	Checklist Template form
`carwash.service.package.line`	Service Package form
`carwash.service.material.line`	Product form, "Car Wash" page (consumables recipe)
`carwash.inspection.photo`	Inspection form
`carwash.appointment.line`	Appointment form, "Services" tab

4. Views & Buttons per Model

Every view type that exists per model, and every action button on it with the group(s) required to see it. Buttons marked all internal users have no group restriction of their own — visibility there comes entirely from whether the user can read/write the underlying model or record. This reflects the *fully merged* arch (base view + every module's inherited additions/overrides combined), which is what actually renders — not any single file in isolation.
