USER GUIDE

# Car Wash Management System

A role-by-role walkthrough — what each person can do and where to find it

| | |
|---|---|
| Roles covered | **Front Desk, Washer/Detailer, QC Inspector, Manager, Owner, Portal Customer** |
| Platform | **Odoo 19 Community Edition, backend app "Car Wash"** |

# Table of Contents

1. Roles at a Glance
2. Front Desk
3. Washer / Detailer
4. QC Inspector
5. Manager
6. Owner
7. Portal Customer (Online Booking)

# 1. Roles at a Glance

Every person who uses the system is assigned to one Car Wash security group by an administrator, under `Settings → Users & Companies → Users`. What menus and buttons a person sees is driven entirely by that group — there's nothing to configure per-screen.

| Role | What they mainly do |
|---|---|
| **Front Desk** | Register customers/vehicles, book and manage appointments, run the live queue |
| **Washer / Detailer** | Work their assigned job cards, check off tasks, submit for QC |
| **QC Inspector** | Pass or fail completed job cards |
| **Manager** | Everything Front Desk can do, plus configuration, memberships, productivity/revenue reporting |
| **Owner** | Everything Manager can do, across every branch at once, plus cross-branch reporting |
| **Portal Customer** | Books a wash online and views their own booking history — no backend access |

> A person can be more than one role at once (e.g. a Manager who also washes cars) — just tick both groups on their user record.

# 2. Front Desk

### Registering a walk-in customer and vehicle

1. Go to `Car Wash → Customers & Vehicles → Vehicles` → New.
2. Pick or create the customer, enter the license plate, make, model and type.

### Creating an appointment

1. `Car Wash → Appointments → New Appointment`.
2. Select the customer, their vehicle, and add one or more services.
3. Click **Confirm** once the services are set.

### Running the live queue

`Car Wash → Queue` shows every appointment for today that isn't finished yet, as a kanban board grouped by status — each card's left border and header icon match its status color. Walk it through with the buttons on each card:

| Button | When it appears | What it does |
|---|---|---|
| Vehicle Arrived | Confirmed | Stamps arrival time (starts the "waiting time" clock shown on the card) |
| Start Service | Arrived | Assigns the bay; the bay must be free |
| Ready | In Service | Only available once the job card has passed QC |
| Complete | Ready | Frees the bay, records material usage, and creates the customer's Sales Order |

A card turning red with a warning icon means No-Show or Cancelled; a green check means Done.

# 3. Washer / Detailer

### Working your job cards

`Car Wash → Job Cards` is filtered to open cards. You'll only ever be offered for assignment if you're in the Washer or Manager group — Front Desk staff can't accidentally assign a non-wash-team person to a job.

1. Open a job card assigned to you (or ask Front Desk/a Manager to assign it).
2. Click **Start** — this begins time tracking automatically; you don't need to do anything else for that.
3. Under the *Tasks* tab, tick off each checklist item as you complete it.
4. Once every task is checked, click **Submit for QC**.

> You only see job cards you're assigned to — this is enforced automatically, not something you need to filter yourself.

# 4. QC Inspector

### Passing or failing a job card

1. `Car Wash → Job Cards`, filter/group by status to find cards in **Quality Check**.
2. Inspect the vehicle, add QC notes if useful.
3. Click **QC Pass** to finish it (this also logs the staff member's time spent, and unblocks Front Desk's "Ready" button on the appointment) — or **QC Fail (Rework)** to send it back to the washer with every checklist item reset to unchecked.

# 5. Manager

A Manager sees everything Front Desk, Washer and QC see, plus:

### Memberships

`Car Wash → Memberships` — enroll a customer on a plan, renew early, or cancel. Billing itself runs automatically on a schedule; **Renew Now** triggers an out-of-cycle billing run on demand.

### Configuration

`Car Wash → Configuration → Services` — the service catalogue, including each service's consumables recipe and estimated duration (this duration is what drives online booking slot lengths).

### Reporting

`Car Wash → Dashboard` — an interactive dashboard with weekly/monthly/quarterly/yearly/custom date filters, revenue and wash-count trends, top products by material usage, and productivity/revenue drill-downs restricted to Managers and above.

## 6. Owner

Everything a Manager can do, but across every branch simultaneously (Odoo's company switcher, top-right, controls which branches are "active" at any moment). The Owner's dashboard adds:

- **Branch Breakdown** — revenue and wash counts side-by-side per branch.
- **Staff Leaderboard** — cross-branch productivity ranking.
- **Membership & Loyalty Totals** and **Billing Overdue** — company-wide, not per-branch.

> Switching which companies are active in the company switcher changes what the dashboard and queue show — this is standard Odoo multi-company behavior, not something specific to this app.

# 7. Portal Customer (Online Booking)

Customers book from the public website — no backend/internal-user access is granted or needed.

### Booking a wash

1. Click **Book a Car Wash** in the website's top menu (or go to `/car-wash/book`). Logging in (or creating a portal account) is required — this is by design.
2. Choose a branch, a service, and a date.
3. Pick one of the real-time available slots shown — each one lists how many bays are free at that time.
4. Choose an existing vehicle, or register a new one inline (plate, make, model, type).
5. Confirm — you'll land on a confirmation page, and the booking immediately appears on the branch's live queue for staff.

### Viewing booking history

Once logged into the portal, `My Account → Car Wash Bookings` (or `/my/bookings`) lists every booking made under that account with its status; click into one for the full detail including the services on it.

> A customer only ever sees their own bookings and vehicles, even if they've booked at more than one branch — never another customer's, and never anyone else's data at any branch.
